Indian Textiles Sector

India is one of the world's largest producers of Textiles and Apparel.

Domestically, it contributes 2.3% to India's GDP and accounts for 13% of industrial production, and 12% of the country's export earnings.

The sector valued at US\$ 160 billion, happens to be one of the oldest industries in the Indian economy, the future for the Indian textile industry looks promising, buoyed by both strong domestic consumption as well as export demand. With consumerism and disposable income on the rise, the retail sector has experienced a rapid growth in the past decade with the entry of several international players like Marks & Spencer, Guess and Next into the Indian market

In this scenario, we bring this Textiles Directory 2026, which is an attempt to profile the textile companies—current capacity, expansion plans etc., along with details of key personnel, address, tel/fax/email etc.,.

The directory covers all textile mills in India making yarns, threads, fabrics, garments, technical textiles and woolen apparels.

Overview

India is one of the world's largest producers of Textiles and Apparel.

The domestic textiles and apparel industry contributes 2.3% to India's GDP and accounts for 13% of industrial production, and 12% of the country's export earnings.

The textiles and apparel industry in India has strengths across the entire value chain from fiber, yarn, fabric to apparel. It is highly diversified with a wide range of segments ranging from products of traditional handloom, handicrafts, wool and silk products to the organized textile industry. The organized textile industry is characterized by the use of capital-intensive technology for mass production of textile products and includes spinning, weaving, processing, and apparel manufacturing.

Fabrics: Indian textile fabrics sector is highly fragmented, very few have integrated operations. Besides it contains a lot of companies operate in small scale and tiny units. However, there is a long network which are tightly integrated to produce the varied demands. Some of them have grown in this fashion due to the patronage of government initiatives like reservation of certain categories in textile sector. Besides, in yester year's embroidery and other handiworks are best suitable for small sector.

However, fabric sector is capital intensive and over the years, many textile companies have set up integrated operations to make some of best textiles. India is also known for cotton fabrics and is specialized in printed cotton fabrics, lycra and knitted fabrics

Garments: India is the second largest garment producer in the world. It has recently replaced Germany & Turkey to reach the spot. Garment forms 45% of overall textile trade and is facing stiff competition from Bangladesh, Vietnam and China. Though India is the second largest textile exporter, it lags well behind China, whose exports are nearly seven times higher.

India's Garment Industry has been rapidly growing in last few years. Exports have been rising as there is an increase in orders from global buyers accompanied by a rise of investments in modernization in the garment sector of the

Indian Textiles Sector

country. It is a key industry as it contributes substantially to India's export earning, it is believed that one out of every six households in the country depends on this sector either indirectly or directly for its livelihood.

The garment industry today can provide employment to additional 1.5 million people and Apparel Export Promotion Council (AEPC) is expected to set up 50 training centre to impart skills. Currently, AEPC has 22 centres

Technical Textiles: Technical Textiles are materials like diapers, fire resistant materials with unique functional properties which has a huge untapped potential in India. Its market size is projected at USD 22 billion in with a projected growth rate of 15%.

To tap the potential, Ministry of Textiles have implemented several schemes. It has established Four Centres of Excellence (CoE) i.e., BTRA for Geotextiles, SASMIRA for Agro textiles, NITRA for Protective Textiles and SITRA for Medical Textiles.

These Centre of Excellence provide infrastructure support in

terms of facilities for testing with national and international accreditation, development of resource centre with I.T. infrastructure, facilities for training, prototype development, standards development on technical textiles, etc.

Ministry of Textiles also launch programmes from time to time to create awareness among entrepreneurs. So far more than 60 Seminars / Workshops / Training programmes were organized by Office of Textile Commissioner across the country.

In continuation to its efforts, Scheme for Promoting the Usage of Agro textiles in North East Region was launched with a financial outlay of INR 550 million. Further, the Scheme for Promoting the Usage of Geotextiles in North East Region with a financial outlay of INR 427 crores is under finalization.

Yarns & Threads: Indian Spinning Industry is the most modern and efficient in the world. With 51 Million Spindles and 0.75 Mn Open-End Rotors, India has the world's second largest spinning capacity, commanding a greater share of the global Cotton Yarn market. It is currently producing over 4700 million kgs of spun yarn of which over 5,500 Mn.Kgs is cotton yarn. Cotton Yarn accounts for nearly 73% of total spun yarn production.

India produces a comprehensive range of yarns for every conceivable end use – non-spun or open-end; combed or carded, basic, compact, mélange or fancy. India's 1943 spinning mills produce them all for requirements ranging from a fine 200 count to a coarse 2 count.

Indian Textiles Sector

With more companies modernizing their mills with state-of-the-art technology, Indian cotton yarn markets is set to boost its export potential. The world's most renowned Indian Cotton Yarns are available as greige, bleached, mercerized, gassed, twisted, dyed or an endless range of fashion yarns like mélangé, stretch, blends, high twist and so on to meet the different applications in fashion, clothing, home textiles, hosiery and industrial fabrics. India can meet every customer requirement whether large or small, regular or customized, premium or basic.

Indian yarn spinners have inducted technologies like compact spinning, using the most advanced yarn – processing technology and high-precision process controls tools like electronic cleaners, auto slavers, splicers, two-for-one twisters and auto-coners give Indian mills a competitive advantage.

Today, Indian yarn is widely accepted in International markets as the exporters here regularly meet the needs of importers with unmatched efficiency.

China is the largest importer of yarns from India. Prices of major raw materials like purified terephthalic acid (PTA) and mono-ethylene glycol (MEG) have major influences on yarns markets and prices, besides crude market – which is the fundamental key raw material.

India government has acted on various times to impose anti-dumping duty on polyester staple fibre imports to protect the sector in India. The Directorate General of Anti-dumping and Allied Duties (DGAD), under the commerce ministry provides advice to Government of India
